

A Cloud-enabled Parking Garage Monitoring System with SmartPhone Notification Messaging

Pictures of Patent/Technology

Descriptions of Patent/Technology

A cloud-enabled, web-based, real-time, parking garage monitoring, communication and information system which can help car drivers to find a parking space within a desired garage with the minimum time and energy needed.

Patent number : N/A

Patent type : N/A

Approved country :

Technology Exchange Type:

To be negotiated

Patent owner contact details :

Paul I-Hai Lin, pilin@purdue.edu

IF the showcase is technology , then only need to fill out the technology exchange type and owner's contact details as above .

Patent/Technology Features :

Applicable industries : Parking facility management industry

Potential customers : City and municipal parking management department, hotel and building parking

Market Analysis of derived product:
