Databases and Web Development

The Role of Databases in Web Development

Databases provide a way to implement one of the most important software design principlesnamely, that:

one should separate that which varies from that which stays the same .

Randy Connolly and Ricardo Hoar

Fundamentals of Web Development - 2nd Ed.

Databases and Web Development

The Role of Databases in Web Development

Content (data)
varies but the
markup (design)
stays the same.

Randy Connolly and Ricardo Hoar

Fundamentals of Web Development - 2nd Ed.

Databases and Web Development

How websites use databases

Randy Connolly and Ricardo Hoar

Fundamentals of Web Development - 2nd Ed.

Databases and Web Development

Database Design

Normally taught in an entire course. This is a refresher.

		Fields			
		Primary key field			
Field names		ArtWorkID	Title	Artist	YearOfWork
Records		345	The Death of Marat	David	1793
		400	The School of Athens	Raphael	1510
		408	Bacchus and Ariadne	Titian	1520
		425	Girl with a Pearl Earring	Vermeer	1665
		438	Starry Night	Van Gogh	1889

Randy Connolly and Ricardo Hoar

Fundamentals of Web Development - 2nd Ed.

Databases and Web Development

Diagramming a table

ArtWorks	
🔑	ArtWorkID INT
	Title VARCHAR
	Artist VARCHAR
	YearOfWork INT

ArtWorks	
PK	<u>ArtWorkID</u>
	Title
	Artist
	YearOfWork

ArtWorks	
	<u>ArtWorkID</u>
	Title
	Artist
	YearOfWork

Randy Connolly and Ricardo Hoar

Fundamentals of Web Development - 2nd Ed.

Databases and Web Development

Foreign keys lining tables

Foreign key

ArtWorkID	Title	ArtistID	YearOfWork
345	The Death of Marat	15	1793
400	The School of Athens	37	1510
408	Bacchus and Ariadne	25	1520
425	Girl with a Pearl Earring	22	1665
438	Starry Night	43	1889

ArtWork table

Primary key

ArtistID	Artist
15	David
22	Vermeer
25	Titian
37	Raphael
43	Van Gogh

Artist table

Randy Connolly and Ricardo Hoar

Fundamentals of Web Development - 2nd Ed.

Sample
Database
Techniques

Randy Connolly and Ricardo Hoar

Fundamentals of Web Development - 2nd Ed.

SQL

SELECT Statement

SQL keyword that indicates the type of query (in this case a query to retrieve data)

SQL keyword for specifying the tables

SELECT ISBN10, Title FROM Books

Fields to retrieve

Table to retrieve from

SELECT * FROM Books

Wildcard to select all fields

Note: While the wildcard is convenient, especially when testing, for production code it is usually avoided; instead of selecting every field, you should select just the fields you need.

Randy Connolly and Ricardo Hoar

Fundamentals of Web Development - 2nd Ed.

SQL

SELECT Statement

select isbn10, title
FROM BOOKS
ORDER BY title

SQL keyword to indicate sort order

Field to sort on

Note: SQL doesn't care if a command is on a single line or multiple lines, nor does it care about the case of keywords or table and field names. Line breaks and keyword capitalization are often used to aid in readability.

SELECT ISBN10, Title FROM Books
ORDER BY CopyrightYear DESC, Title ASC

Keywords indicating that sorting should be in descending or ascending order (which is the default)

Several sort orders can be specified: in this case the data is sorted first on year, then on title

Randy Connolly and Ricardo Hoar

Fundamentals of Web Development - 2nd Ed.

SQL

Use the WHERE clause

```
SELECT isbn10, title FROM books
WHERE copyrightYear > 2010
```

SQL keyword that indicates to return only those records whose data matches the criteria expression

Expressions take form: field *operator* value

```
SELECT isbn10, title FROM books
WHERE category = 'Math' AND copyrightYear = 2014
```

Comparisons with strings require string literals (single or double quote)

Randy Connolly and Ricardo Hoar

Fundamentals of Web Development - 2nd Ed.

SQL

Join together

Randy Connolly and Ricardo Hoar

Fundamentals of Web Development - 2nd Ed.

SQL

Member group by

This aggregate function returns a count of the number of records

Defines an alias for the calculated value

```
SELECT Count(ArtWorkID) AS NumPaintings
FROM ArtWorks
WHERE YearOfWork > 1900
```

Count number of paintings after year 1900

Note: This SQL statement returns a single record with a single value in it.

NumPaintings
745

```
SELECT Nationality, Count(ArtistID) AS NumArtists
FROM Artists
GROUP BY Nationality
```

SQL keywords to group output by specified fields

Note: This SQL statement returns as many records as there are unique values in the group-by field.

Nationality	NumArtists
Belgium	4
England	15
France	36
Germany	27
Italy	53

Randy Connolly and Ricardo Hoar

Fundamentals of Web Development - 2nd Ed.

SQL

INSERT, UPDATE, and DELETE Statements

SQL keywords for inserting (adding) a new record

Table name

Fields that will receive the data values

```
INSERT INTO ArtWorks (Title, YearOfWork, ArtistID)
VALUES ('Night Watch', 1642, 105)
```

Values to be inserted. Note that string values must be within quotes (single or double).

Note: Primary key fields are often set to *AUTO_INCREMENT*, which means the DBMS will set it to a unique value when a new record is inserted.

```
INSERT INTO ArtWorks
SET Title='Night Watch', YearOfWork=1642, ArtistID=105
```

Nonstandard alternate MySQL syntax, which is useful when inserting record with many fields (less likely to insert wrong data into a field).

Randy Connolly and Ricardo Hoar

Fundamentals of Web Development - 2nd Ed.

SQL

INSERT, UPDATE, and DELETE Statements

```
UPDATE ArtWorks  
SET Title='Night Watch', YearOfWork=1642, ArtistID=105  
WHERE ArtWorkID=54
```

It is essential to specify which record to update, otherwise it will update all the records!

Specify the values for each updated field.
Note: Primary key fields that are AUTO_INCREMENT cannot have their values updated.

Randy Connolly and Ricardo Hoar

Fundamentals of Web Development - 2nd Ed.

SQL

INSERT, UPDATE, and DELETE Statements

```
DELETE FROM ArtWorks  
WHERE ArtWorkID=54
```

It is essential to specify which record to delete, otherwise it will delete all the records!

Randy Connolly and Ricardo Hoar

Fundamentals of Web Development - 2nd Ed.

SQL

Transactions

By starting the transaction, all database modifications within the transaction will only be permanently saved in the database if they all work

START TRANSACTION

INSERT INTO orders . . .

INSERT INTO orderDetails . . .

UPDATE inventory . . .

/* if we have made it here everything has worked so commit changes */

COMMIT

/* if we replace **COMMIT** with **ROLLBACK** then the three database changes would be "undone" */

Randy Connolly and Ricardo Hoar

Fundamentals of Web Development - 2nd Ed.

SQL

Distributed Transactions

Randy Connolly and Ricardo Hoar

Fundamentals of Web Development - 2nd Ed.

SQL

Data Definition Statements

All of the SQL examples that you will use in this book are examples of **the Data Manipulation Language** features of SQL, that is, SELECT , UPDATE , INSERT , and DELETE .

There is also a **Data Definition Language** (DDL) in SQL, which is used for creating tables, modifying the structure of a table, deleting tables, and creating and deleting databases

While the book's examples do not use these database administration statements within PHP, your instructor may, and you may find yourself using them indirectly within something like the phpMyAdmin management tool anyhow.

SQL

Database Indexes and Efficiency

ISBN	Title	Year

NoSQL

A different way of thinking

Randy Connolly and Ricardo Hoar

Fundamentals of Web Development - 2nd Ed.

NoSQL

Key-Value Stores

- **Key-value stores** alone are very simplistic in that each record consists of one key and one value (i.e., is, they are analogous to PHP arrays).
- fast retrieval through means such as a hash function
- No need for indexes

NoSQL

Document Stores

Document Stores associate keys with values, but unlike key-value stores, they call that value a **document**.

ID	Document
142	<pre>{ "User": { "FirstName": "Pablo", "LastName": "Picasso", "Address": { "Address1": "15-23 Carrer Montcada", "City": "Barcelona", "Country": { "Name": "Spain", "Population": 46042812 }, "PostalCode": "08003" } } }</pre>

NoSQL

Column Stores

Row-wise storage

	ID	Title	Artist	Year
Row # 1	345	The Death of Marat	David	1793
2	400	The School of Athens	Raphael	1510
3	408	Bacchus and Ariadne	Titian	1521
4	425	Girl with a Pearl Earring	Vermeer	1665
5	438	Starry Night	Van Gogh	1889

Column-wise storage

	ID		Title		Artist		Year
1	345	1	The Death of Marat	1	David	1	1793
2	400	2	The School of Athens	2	Raphael	2	1510
3	408	3	Bacchus and Ariadne	3	Titian	3	1521
4	425	4	Girl with a Pearl Earring	4	Vermeer	4	1665
5	438	5	Starry Night	5	Van Gogh	5	1889

Database APIs

PHP MySQL APIs

- **MySQL extension.** This was the original extension to PHP for working with MySQL and has been replaced with the newer mysqli extension.
- **mysqli extension.** This extension provides both a procedural and an object-oriented approach. This extension also supports most of the latest features of MySQL.
- **PHP data objects (PDOs).** provides an abstraction layer that with the appropriate drivers can be used with any database, and not just MySQL databases. However, it is not able to make use of all the latest features of MySQL.

Randy Connolly and Ricardo Hoar

Fundamentals of Web Development - 2nd Ed.

Database APIs

Deciding on a Database API

While PDO is unable to take advantage of some features of MySQL, there is a lot of merit to the fact that PDO can create database-independent PHP code

- Like many things in the web world, there is no single best choice.
- As the chapter (and book) proceed, we will standardize on the object-oriented, database-independent PDO approach.

Randy Connolly and Ricardo Hoar

Fundamentals of Web Development - 2nd Ed.

mysql>
```

Randy Connolly and Ricardo Hoar

Fundamentals of Web Development - 2nd Ed.

Managing a MySQL Database

Command-Line Interface

To launch an interactive MySQL command-line session, you must specify the host, username, and database name to connect to as shown below:

```
mysql -h 192.168.1.14 -u bookUser -p
```

To import commands from a file called commands.sql, for example, we would use the < operation:

```
mysql -h 192.168.1.14 -u bookUser -p < commands.sql
```

Randy Connolly and Ricardo Hoar

Fundamentals of Web Development - 2nd Ed.

Managing a MySQL Database

phpMyAdmin

MySQL has a number of predefined databases it uses for its own operation.

phpMyAdmin allows you to view and manipulate any table in a database.

Randy Connolly and Ricardo Hoar

Fundamentals of Web Development - 2nd Ed.

8 Sample Database Techniques

Fundamentals of Web Development - 2nd Ed.

Accessing MySQL in PHP

Basic Connection Algorithm

1. Connect to the database.
2. Handle connection errors.
3. Execute the SQL query.
4. Process the results.
5. Free resources and close connection.

Randy Connolly and Ricardo Hoar

Fundamentals of Web Development - 2nd Ed.

Accessing MySQL in PHP

Basic Connection Algorithm

```

<?php

try {
    $connString = "mysql:host=localhost;dbname=bookcrm";
    $user = "testuser";
    $pass = "mypassword";

    $pdo = new PDO($connString,$user,$pass);
    $pdo->setAttribute(PDO::ATTR_ERRMODE, PDO::ERRMODE_EXCEPTION);

    $sql = "SELECT * FROM Categories ORDER BY CategoryName";
    $result = $pdo->query($sql);

    while ($row = $result->fetch()) {
        echo $row['ID'] . " - " . $row['CategoryName'] . "<br/>";
    }
    $pdo = null;
} catch (PDOException $e) {
    die( $e->getMessage() );
}

?>

```

Randy Connolly and Ricardo Hoar

Fundamentals of Web Development - 2nd Ed.

Accessing MySQL in PHP

Connecting to a Database (mysqli procedural)

```
// modify these variables for your installation
$host = "localhost";
$database = "bookcrm";
$user = "testuser";
$pass = "mypassword";
$connection = mysqli_connect($host, $user, $pass, $database);
```

Accessing MySQL in PHP

Connecting to a Database (PDO Object-oriented)

```
// modify these variables for your installation
$connectionString = "mysql:host=localhost;dbname=bookcrm";
$user = "testuser";
$pass = "mypassword";
$pdo = new PDO($connectionString, $user, $pass);
```

Accessing MySQL in PHP

Handling Connection Errors - mysqli

```
$connection = mysqli_connect(DBHOST, DBUSER, DBPASS, DBNAME);

// mysqli_connect_errno returns the last error code

if ( mysqli_connect_errno() ) {

    die( mysqli_connect_error() );
    // die() is equivalent to exit()

}
```

Randy Connolly and Ricardo Hoar

Fundamentals of Web Development - 2nd Ed.

Accessing MySQL in PHP

Handling Connection Errors - PDO

```
try {

    $connString = "mysql:host=localhost;dbname=bookcrm";
    $user = DBUSER;
    $pass = DBPASS;
    $pdo = new PDO($connString,$user,$pass);

    ...

}

catch (PDOException $e) {

    die( $e->getMessage() );

}
```

Randy Connolly and Ricardo Hoar

Fundamentals of Web Development - 2nd Ed.

Accessing MySQL in PHP

Executing the Query

```
$sql = "SELECT * FROM Categories ORDER BY CategoryName";  
  
// returns a mysqli_result object  
  
$result = mysqli_query($connection, $sql);  
  
OR  
  
$result = $pdo->query($sql);
```

Randy Connolly and Ricardo Hoar

Fundamentals of Web Development - 2nd Ed.

Accessing MySQL in PHP

Processing the Query Results

```
$sql = "SELECT * FROM Categories ORDER BY CategoryName";  
  
// run the query  
  
$result = $pdo->query($sql);  
  
// fetch a record from result set into an associative array  
while ($row = $result->fetch()) {  
    // the keys match the field names from the table  
    echo $row['ID'] . " - " . $row['CategoryName'];  
    echo "<br/>";  
}
```

Randy Connolly and Ricardo Hoar

Fundamentals of Web Development - 2nd Ed.

Accessing MySQL in PHP

Processing the Query Results

```
$sql = "select * from Paintings";
$result = $pdo->query($sql);
```

`$result`
Result set is a type
of cursor to the
retrieved data

ID	Title	Artist	Year
345	The Death of Marat	David	1793
400	The School of Athens	Raphael	1510
408	Bacchus and Ariadne	Titian	1520
425	Girl with a Pearl Earring	Vermeer	1665
438	Starry Night	Van Gogh	1889

```
$row = $result->fetch()
```

`$row`
Associative
array

ID	Title	Artist	Year
345	Death of Marat	David	1793

keys values

Randy Connolly and Ricardo Hoar

Fundamentals of Web Development - 2nd Ed.

Accessing MySQL in PHP

Freeing Resources and Closing Connection

```
//closes the connection
```

```
mysqli_close($connection);
```

```
// closes connection and frees the resources used by the PDO object
```

```
$pdo = null;
```

Randy Connolly and Ricardo Hoar

Fundamentals of Web Development - 2nd Ed.

Accessing MySQL in PHP

Working with Parameters

```
$sql = "UPDATE Categories SET CategoryName='Web' WHERE  

       CategoryName='Business'";  

$count = $pdo->exec($sql);  

echo "<p>Updated " . $count . " rows</p>";
```

Randy Connolly and Ricardo Hoar

Fundamentals of Web Development - 2nd Ed.

Accessing MySQL in PHP

Working with Parameters – Technique 1 ? Placeholders

```
$sql = "INSERT INTO books (ISBN10, Title, CopyrightYear, ImprintId,  

ProductionStatusId, TrimSize, Description) VALUES (?,?,?,?  

?,?,?);"  

$statement = $pdo->prepare($sql);  

$statement->bindValue(1, $_POST['isbn']);  

$statement->bindValue(2, $_POST['title']);  

$statement->bindValue(3, $_POST['year']);  

$statement->bindValue(4, $_POST['imprint']);  

$statement->bindValue(5, $_POST['status']);  

$statement->bindValue(6, $_POST['size']);  

$statement->bindValue(7, $_POST['desc']);  

$statement->execute();
```

Randy Connolly and Ricardo Hoar

Fundamentals of Web Development - 2nd Ed.

Accessing MySQL in PHP

Working with Parameters – Technique 1 ? Placeholders *with Array*

/ can pass an array, to be used in order */*

```
$sql = "INSERT INTO books (ISBN10, Title, CopyrightYear, ImprintId,
ProductionStatusId, TrimSize, Description) VALUES (?,?,?,?
?,?,?);";
$statement = $pdo->prepare($sql);
$statement->execute(array(array($_POST['isbn'],
$_POST['title'], $_POST['year'], $_POST['imprint'], $_POST['status'],
$_POST['size'], $_POST['desc'])));
```

Randy Connolly and Ricardo Hoar

Fundamentals of Web Development - 2nd Ed.

Accessing MySQL in PHP

Working with Parameters – Technique 2 - named parameters

```
$sql = "INSERT INTO books (ISBN10, Title, CopyrightYear, ImprintId,
ProductionStatusId, TrimSize, Description) VALUES (:isbn,
:title, :year, :imprint, :status, :size, :desc) ";
$statement = $pdo->prepare($sql);
$statement->bindValue(':isbn', $_POST['isbn']);
$statement->bindValue(':title', $_POST['title']);
$statement->bindValue(':year', $_POST['year']);
$statement->bindValue(':imprint', $_POST['imprint']);
$statement->bindValue(':status', $_POST['status']);
$statement->bindValue(':size', $_POST['size']);
$statement->bindValue(':desc', $_POST['desc']);
$statement->execute();
```

Randy Connolly and Ricardo Hoar

Fundamentals of Web Development - 2nd Ed.

Accessing MySQL in PHP

Working with Parameters – Technique 2 - named parameters *with Array*

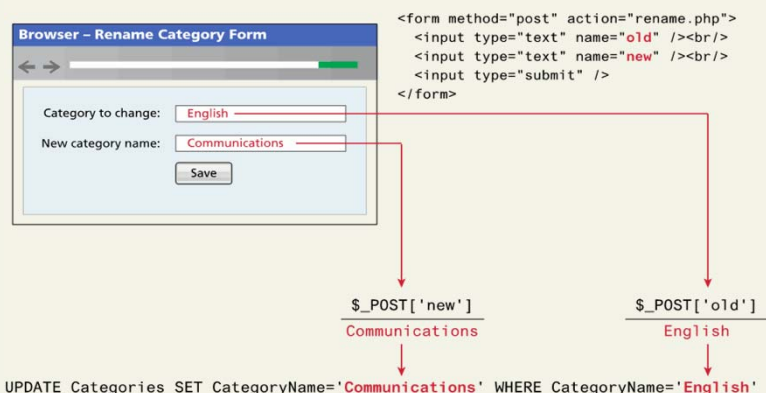

```
$sql = "INSERT INTO books (ISBN10, Title, CopyrightYear, ImprintId,
ProductionStatusId, TrimSize, Description) VALUES (:isbn,
:title, :year, :imprint, :status, :size, :desc) ";
$statement = $pdo->prepare($sql);
$statement->execute(array(':isbn' => $_POST['isbn'],
                        ':title'=> $_POST['title'],
                        ':year'=> $_POST['year'],
                        ':imprint'=> $_POST['imprint'],
                        ':status'=> $_POST['status'],
                        ':size'=> $_POST['size']
                        ':desc'=> $_POST['desc']));
```

Randy Connolly and Ricardo Hoar

Fundamentals of Web Development - 2nd Ed.

Accessing MySQL in PHP

Getting user input into a query

Randy Connolly and Ricardo Hoar

Fundamentals of Web Development - 2nd Ed.

Accessing MySQL in PHP

Using Transactions

```
$pdo = new PDO($connString,$user,$pass);

try {
    // begin a transaction
    $pdo->beginTransaction();
    // a set of queries: if one fails, an exception will be thrown
    $pdo->query("INSERT INTO Categories (CategoryName) VALUES ('Philosophy')");
    $pdo->query("INSERT INTO Categories (CategoryName) VALUES ('Art')");
    // if we arrive here, it means that no exception was thrown
    $pdo->commit();
} catch (Exception $e) {
    // we must rollback the transaction since an error occurred with insert
    $pdo->rollback();
}
```

Randy Connolly and Ricardo Hoar

Fundamentals of Web Development - 2nd Ed.

Accessing MySQL in PHP

Advanced example

```
<?php
// get database connection details
require_once('config-travel.php');

// retrieve continent from querystring
$continent = 'EU';
if (isset($_GET['continent'])) {
    $continent = $_GET['continent'];
}

...
<h1>Countries</h1>
<?php
try {
    $pdo = new PDO(DBCONNSTRING,DBUSER,DBPASS);
    $pdo->setAttribute(PDO::ATTR_ERRMODE, PDO::ERRMODE_EXCEPTION);

    // construct parameterized query - notice the ? parameter
    $sql = "SELECT * FROM geocountries WHERE Continent=? ORDER BY CountryName ";
    // run the prepared statement
    $statement = $pdo->prepare($sql);
    $statement->bindValue(1, $continent);
    $statement->execute();
    // output the list
    echo makeCountryList($statement);
} catch (PDOException $e) {
    die($e->getMessage());
} finally {
    $pdo = null;
}

function makeCountryList($statement) {
    $htmlList = "<ul>";
    $foundOne = false;
    while ($row = $statement->fetch()) {
        $foundOne = true;
        $htmlList .= "<li>";
        $htmlList .= "<a href='country.php?iso=' . $row['ISO'] . '>'";
        $htmlList .= $row['CountryName'];
        $htmlList .= "</a>";
        $htmlList .= "</li>";
    }
    $htmlList .= "</ul>";
    if ($foundOne) return $htmlList;
    return "No countries found";
}
```

```
config-travel.php
<?php
define('DBHOST', 'localhost');
define('DBNAME', 'travel');
define('DBUSER', 'testuser2');
define('DBPASS', 'mypassword');
define('DBCONNSTRING',
    'mysql:host=localhost;dbname=travel');

Randy Connolly and Ricardo Hoar

Fundamentals of Web Development - 2nd Ed.

Chapter 14

1

Databases and
Web
Development

2

SQL

3

NoSQL

4

Database APIs

5

Managing a
MySQL
Database

6

Accessing
MySQL in PHP

7

Case Study
Schemas

8

Sample
Database
Techniques

9 Summary

Randy Connolly and Ricardo Hoar

Fundamentals of Web Development - 2nd Ed.

Summary

Key Terms

abstraction layer	document stores	phpMyAdmin
aggregate functions	field	prepared statement
binary tree	foreign key	primary key
BLOB	hash table	procedural API
column store	index	query
composite key	inner join	record
connection	join	result set
connection string	key-value stores	sanitization
database	local transactions	schema
database API	many-to-many relationship	SQL
data integrity	MySQL	SQL script
data definition language (DDL)	named parameter	table
data duplication	No-SQL database	transaction
data manipulation language	object-oriented API	two-phase commit
database normalization	one-to-many relationship	
distributed transactions	one-to-one relationship	

Randy Connolly and Ricardo Hoar

Fundamentals of Web Development - 2nd Ed.
