

**CPET 565/499**  
**Mobile Computing Systems**  
**Lecture 6**  
**Highlights of Android Example Codes**

Fall 2014

A Specialty Course for Purdue University's M.S. in Technology  
Graduate Program

**Paul I-Hai Lin, Professor**

**Dept. of Computer, Electrical and Information Technology**  
**Purdue University Fort Wayne Campus**

Prof. Paul Lin

1

**Text Book: Android Applications  
Development in 24 Hours**

Hour 2: Understanding an Android Activity

- A Class - MainActivity
  - **onCreate()**:
  - a Button
  - a EditText field
- Starting (Launching) one activity from another
  - Activity A <=> Activity B
  - intent-filter
  - Stack (Back Stack)

Prof. Paul Lin

2

## Text Book: Android Applications Development in 24 Hours

Hour 2: Understanding an Android Activity

### Listing 2.1 Starting ActivityB from Button Click (ActivityA.java)

```
public class ActivityA extends Activity {  
    TextView t;  
    @Override  
    protected void onCreate(Bundle savedInstanceState) {  
        super.onCreate(savedInstanceState);  
        setContentView(R.layout.activity_a_layout);  
        Button b = (Button) findViewById(R.id.button1);  
        t = (TextView) findViewById(R.id.textView1);  
        b.setOnClickListener(new OnClickListener() {  
            public void onClick(View v) {  
                Intent intent = new Intent(ActivityA.this, ActivityB.class);  
                startActivity(intent);  
            }  
        });  
    }  
}
```

Prof. Paul Lin

3

## Text Book: Android Applications Development in 24 Hours

Hour 2: Understanding an Android Activity

### Listing 2.3 ActivityB Starting Activity A (ActivityB.java)

```
public class ActivityA extends Activity {  
    TextView t;  
    @Override  
    protected void onCreate(Bundle savedInstanceState) {  
        super.onCreate(savedInstanceState);  
        setContentView(R.layout.activity_a_layout);  
        TextView t = (TextView) findViewById(R.id.textView1);  
        t.setText("This is Activity B");  
        Button b = (Button) findViewById(R.id.button1);  
        b.setOnClickListener(new OnClickListener() {  
            public void onClick(View v) {  
                Intent intent = new Intent(ActivityB.this, ActivityA.class);  
                startActivity(intent);  
            }  
        });  
    }  
}
```

Prof. Paul Lin

4

## Android Applications Development in 24 Hours: Hour 2 Understanding an Android Activity

### Passing Information Between Activities

- Using "Extra" data: Strings, Integers, Boolean
- Using "Bundle": More complex data types
- **Listing 2.6 Adding data to an intent**

```
.... Button b = (Button)findViewById(R.id.button1);
    t = (TextView) findViewById (R.id.textView1);
    b.setOnClickListener(new OnClickListener() {
        public void onClick(View v) {
            Intent intent = new Intent(ActivityA.this, ActivityB.class);
            intent.setFlags(Intent.FLAG_ACTIVITY_NEW_TASK|Intent.FLAG_ACTIVITY_CLEAR_TOP);
            Bundle b = new Bundle();          b.putString("greeting", "Hello");
            intent.putExtra("greetingBundle", b); intent.putExtra("message", "World!");
            intent.putExtra("showAll", true);   intent.putExtra("numItems", 5);
            startActivity(intent); }  });
```

Prof. Paul Lin

5

## Android Applications Development in 24 Hours: Hour 2 Understanding an Android Activity

### Passing Information Between Activities

- **Listing 2.7 Accessing Extra Data from an intent (ActivityB.java)**

@Override

```
protected void onCreate(Bundle savedInstanceState) {
    super.onCreate(savedInstanceState);
    setContentView(R.layout.activity_b_layout);
    TextView t = (TextView) findViewById(R.id.textView1);
    Intent intent = getIntent(); ....
    Bundle bundle = intent.getBundleExtra("greetingBundle");
    String greeting = bundle.getString("greeting");
    String message = intent.getStringExtra("message");
    Boolean showAll = intent.getBooleanExtra("showAll", false);
    int numItems = intent.getIntExtra("numItems",0);
    t.setText("This is Activity B: " + greeting + " "
              + message + " " + showAll + " " + numItems);
}
```

Prof. Paul Lin

6

## Android Applications Development in 24 Hours: Hour 2 Understanding an Android Activity

Returning a Result: Using StartActivityForResult

- Handle result and any data, An app that upload photos...

**Listing 2.8 Starting Code for Activity C (one EditText, two buttons, ActivityC.java)**

```
protected void onCreate(Bundle savedInstanceState) {  
    super.onCreate(savedInstanceState);  
    setContentView(R.layout.activity_c_layout);  
    final EditText e = (EditText)findViewById(R.id.editText1);  
    Button send = (Button)findViewById(R.id.button1);  
    send.setOnClickListener(new OnClickListener() {  
        public void onClick(View v) {  
            // add send button code here} }));  
    Button cancel = (Button)findViewById(R.id.button2);  
    cancel.setOnClickListener(new OnClickListener() {  
        public void onClick(View v) {  
            // add cancel button code here } }));  
}
```

7

## Android Applications Development in 24 Hours: Hour 2 Understanding an Android Activity

Returning a Result: Using StartActivityForResult

- Handle result and any data, An app that upload photos...

**Listing 2.9 Returning Result from an Activity (ActivityC.java)**

```
send.setOnClickListener(new OnClickListener() {  
    public void onClick(View v) {  
        Intent result = new Intent();  
        result.putExtra("Data", e.getText().toString());  
        setResult(Activity.RESULT_OK, result);  
        finish();  
    }  
});
```

8

## Android Applications Development in 24 Hours: Hour 2 Understanding an Android Activity

### Understanding and Using Intents

- **Pass data to an activity, request a result from an activity**
    - Explicit intents – refers by class name
  - **Implicit intents (specify action to take, not the activity to take):**
    - Retrieve an image from the file system; Take a picture with camera
  - **Using Intents to launch other applications: Launching**
    - The built-in web browser and supplying a URL
- ```
Uri address = Uri.parse("http://developer.android.com/");
Intent androidDocs = new Intent(Intent.ACTION_VIEW, address);
startActivity(androidDocs);
```

Prof. Paul Lin

9

## Android Applications Development in 24 Hours: Hour 2 Understanding an Android Activity

### Understanding and Using Intents

- **Using Intents to launch other applications: Launching**
  - The built-in web browser and supplying a URL
  - The web browser and supply a search string
  - The built-in phone dialer app and supplying a phone number
  - Built-in Map app and supplying a location
  - Google Street View and supplying a location
  - Built-in camera app in still or video mode
  - Ringtone picker
  - Recording a sound
