

Design of a Web-Based Services for Supporting AVL System

Brent Clark

Student of Computer Engineering Technology

Paul I-Hai Lin

Advisor and Instructor

May 3 2013

Topics of Discussion

- Introduction
- Problem Statement and Solution
- System Design
- System Analysis
- System Integration and Testing
- Lessons Learned

Introduction

- What is AVL?
- AVL and GPS
- How can AVL be used for fleet management?
- Zoom Information Systems
 - TerraFleet

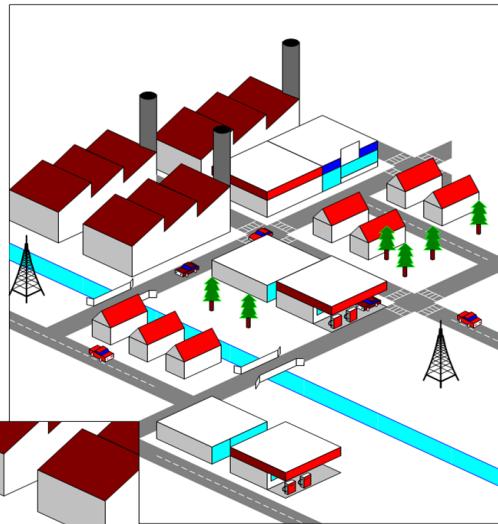

Figure 1. Overview of AVL Connection between device in vehicle and Cellular tower

Problem Statement

- Problems with the current systems
 - Flexibility
 - Portability
 - Expandable

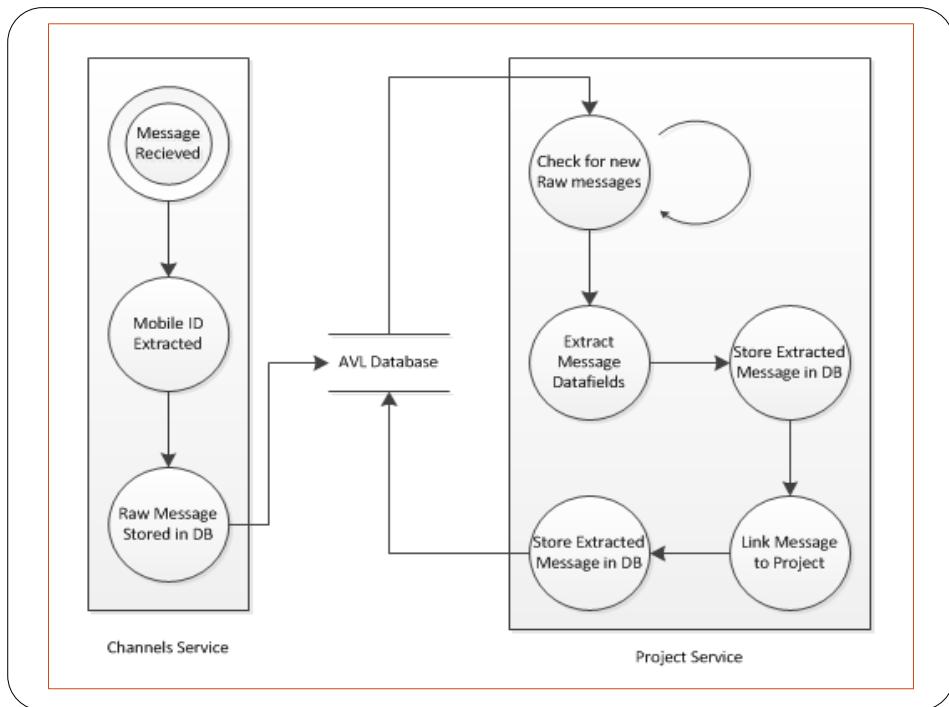

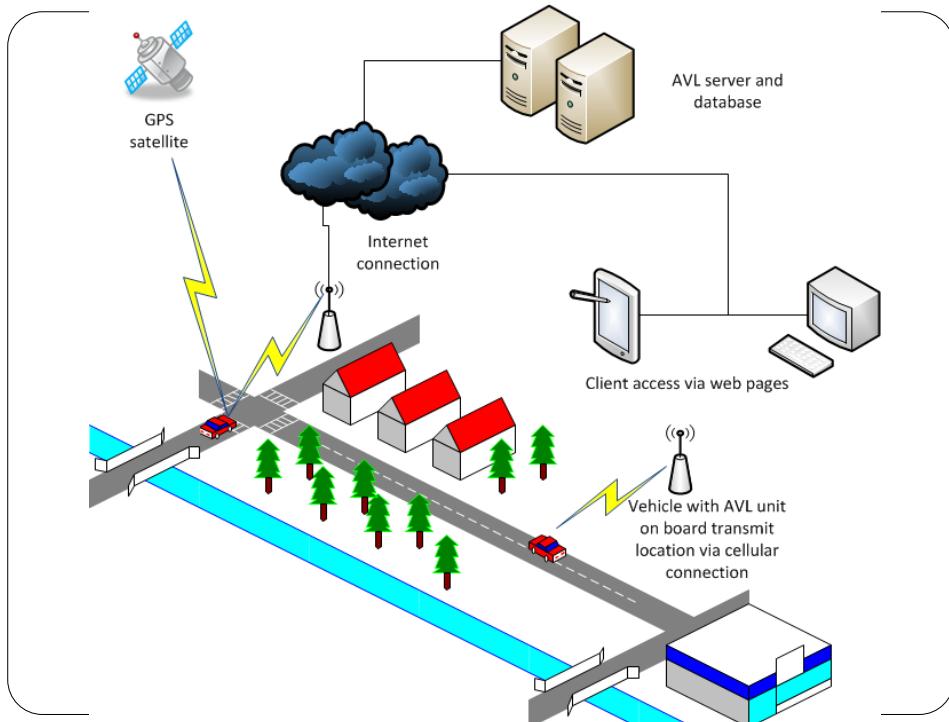

Source: calamp.com

Solution

- Solution
 - Mobile devices
 - Elimination of dedicated hardware
- Added value to existing system
 - Android operating system
 - Integrated features

System Design

- Critical enabling technology
 - Internet
 - Necessary for server service to store data
 - Cellular carrier networks
 - Necessary for transmission of tracking data
 - Global Positioning System
 - Necessary to perform all tracking
 - Zoom's TerraFleet
 - Existing AVL platform

Message Formats

Field	Length (bytes)	Description
Message Header	2	Known bytes for error check
Mobile ID	6	Unique identifier of the device
Message Sequence	2	Unique message sequence number
Message Type	1	Type of message (see Message Type table)
Payload Length	2	Length of the message payload
Payload	Variable	Specific to message types
CRC	1	Least-significant byte of the sum of all message bytes excluding Message Header and CRC

Message Types

Message Type Values		
Message Type	Value	Description
Acknowledgement (Ack)	1	Message acknowledgement
Negative Acknowledgement (Nack)	2	Signifies a problem with the message
User Data Message	4	User Information from QR code
Picture Message	9	Picture sent from Android device
Location Message	10	Generic location report

Acknowledgement Message

Field	Length (bytes)	Description
Message Header	2	Known bytes for error check
Mobile ID	6	Unique identifier of the device
Message Sequence	2	Unique message sequence number
Message Type	1	Value of 1 for Ack message
Payload Length	2	Length of the message payload
Mobile ID	6	Same Mobile ID as the message replying to
Message Sequence	2	Same sequence number as the message replying to

Complete Location Message Format

Field	Length (bytes)	Description
Message Header	2	Known bytes for error check
Mobile ID	6	Unique identifier of the device
Message Sequence	2	Unique message sequence number
Message Type	1	Type of message (see Message Type table)
Payload Length	2	The value of the length for the location message is 21 bytes
Timestamp	4	Offset in seconds from GPS epoch (January 1, 1970 00:00:00 UTC)
Longitude	4	Actual longitude * 10000000 Decimal degrees
Latitude	4	Actual latitude * 10000000 Decimal Degrees
Altitude	2	Actual altitude * 100 Meters above sea level
Heading	2	Actual heading *100 Decimal degrees, 0 north increasing clockwise
Speed	2	Actual speed * 100 Meters per second
Distance	2	Actual distance * 100 Meters Distance accumulator from install time
GPS Quality	1	Indication of the strength of the GPS signal, 0, 1, or 2. 0 is worst.
CRC	1	Least-significant byte of the sum of all message bytes excluding Message Header and CRC

Complete Picture Message Format		
Field	Length (bytes)	Description
Message Header	2	Known bytes for error check
Mobile ID	6	Unique identifier of the device
Message Sequence	2	Unique message sequence number
Message Type	1	Type of message (see Message Type table)
Payload Length	2	The value of the length for the location message is variable
Chunk Number	2	Current piece of the image
Total Chunks	2	Total amount of pieces image has been split into
Image Chunk	Variable	Chunk of image bytes

System Analysis

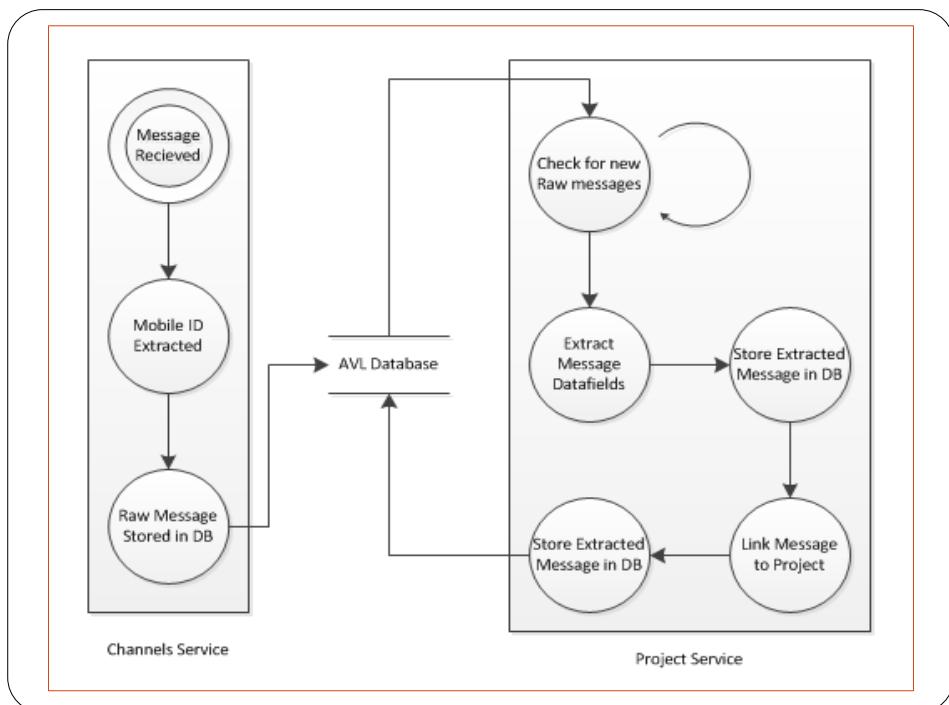

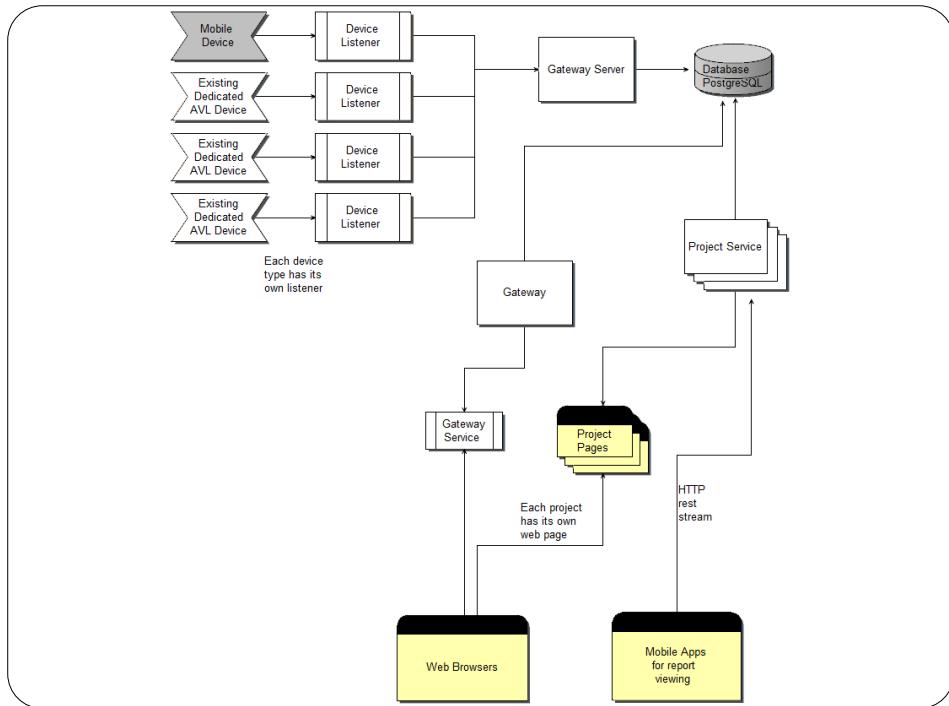

- Scope Definition
- Requirements analysis
- Logical design

Scope

- The scope of this project will encompass the following:
 - Three additional class libraries to support the new protocol
 - Database modifications to allow for images

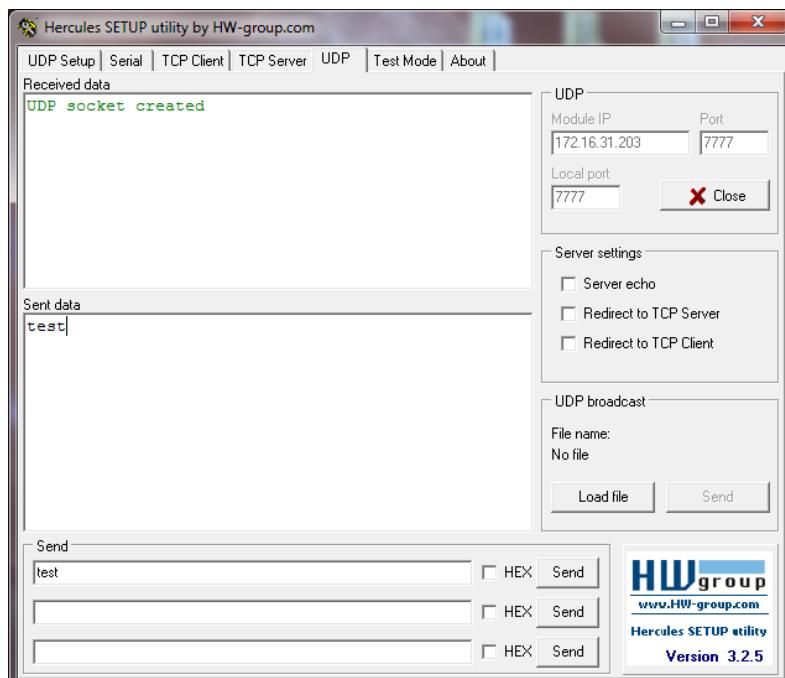

Key Requirements

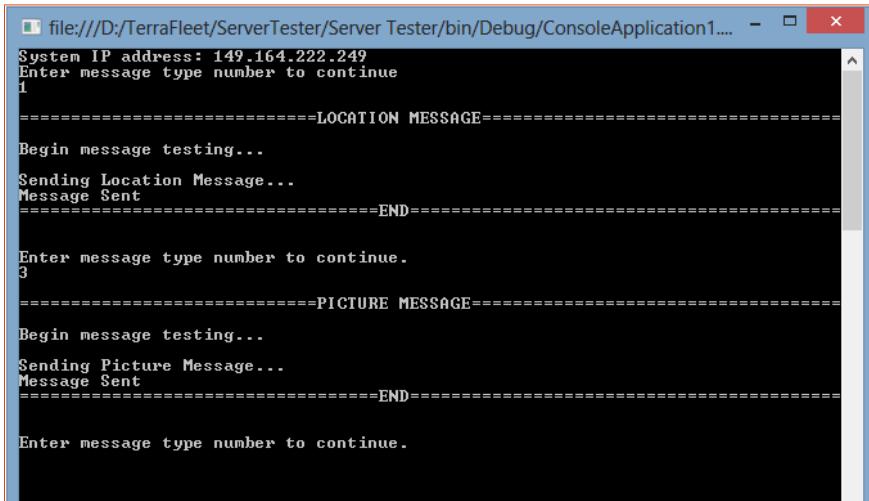

- Project SHALL use message protocol established by Zoom
- Project SHALL integrate into existing TerraFleet software
- Project SHALL be compatible with existing AVL database

System Integration and Testing

- Testing Tools
 - Hercules SETUP Utility
 - ServerTester
 - Log2Console
- Testing Method

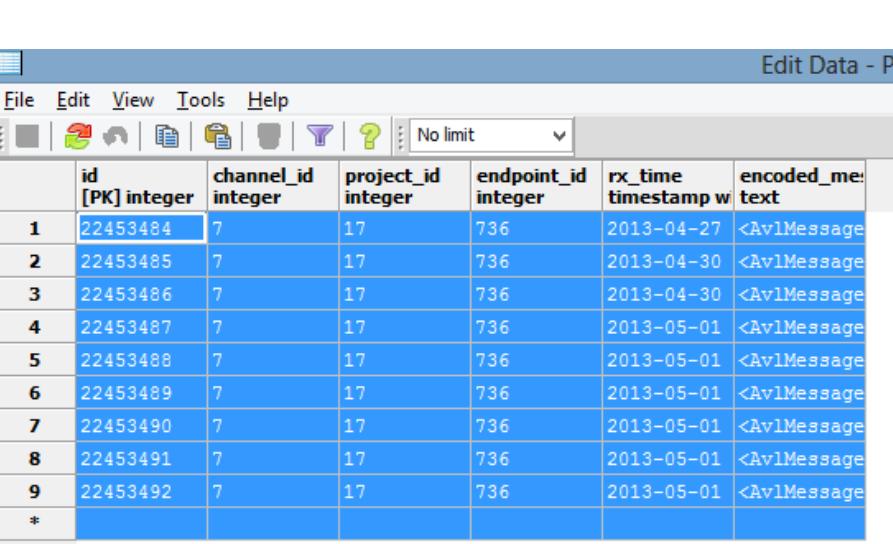

file:///D:/TerraFleet/ServerTester/Server Tester/bin/Debug/ConsoleApplication1... - □ ×

```
System IP address: 149.164.222.249
Enter message type number to continue
1
=====LOCATION MESSAGE=====
Begin message testing...
Sending Location Message...
Message Sent
=====END=====

Enter message type number to continue.
3
=====PICTURE MESSAGE=====
Begin message testing...
Sending Picture Message...
Message Sent
=====END=====

Enter message type number to continue.
```
