

CPET 491/ECET 491 Senior Design Project Phase II Lecture 1

Spring 2013

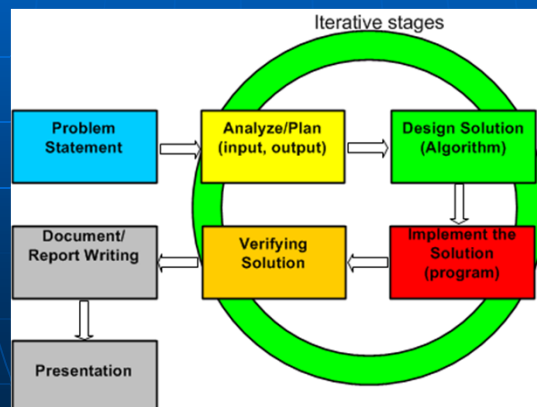

Paul I-Hai Lin, Professor of Electrical & Computer Engr. Technology
Dept. of Computer, Electrical and Information Technology
Purdue University Fort Wayne Campus

Prof. Paul Lin

1

CPET 491/ECET 491 Course Description

- Course Description: P: 490. Phase II includes, but is not limited to: (1) continued research and finalized design, (2) oral presentation to faculty and other interested parties, (3) standard-format written technical report.

2

Project Specific Pre-requisites for CPET 491/ECET 491

- CPET 470 Technology Project Management (completed)
- ENGW 234 Tech Report Writing (completed)
- ENGW 421 Tech Writing Projects (concurrently taking)
- ECET 491 students: completed all ECET required technical courses (ECET 307, ECET 357), and majority of project related preparation courses, MA 321
- CPET 491 students: completed all CPET required courses and majority of project related preparation courses, STAT 301

Prof. Paul Lin

3

Course Outcomes

1. Use of knowledge and skills
2. Conduct unit and system testing, collect testing data and interpret results
3. Write progress and final project report
4. Make oral presentations
5. Demonstrate project performance

Prof. Paul Lin

4

Course Outcomes (cont.)

1. Use of knowledge and skills
 1. Prototype product and assembly drawings
 2. System architecture/subsystems/PCB circuit layout and drawing
 3. Use of modeling/simulation (MATLAB, Multisim, etc.) techniques
 4. Use of project management tools
 5. Use of modern software and development methodologies
 6. Application of advanced mathematics
 7. Application of system engineering and management concepts

Prof. Paul Lin

5

Course Outcomes (cont.)

1. Use of knowledge and skills
 8. Use of current and emerging technological knowledge
 9. Apply creativity in hardware system/subsystem/circuit design
 10. Apply creativity in software system/subsystem/program design
 11. Problem solving knowledge and skills

Prof. Paul Lin

6

Course Outcomes (cont.)

2. Conduct unit and system testing, collect testing data and interpret results
 1. Valid and appropriate subsystem testing results (signal acquisition, processing, reporting, HMI, etc)
 2. System construction and integration testing results
3. Write progress and project reports
4. Make oral presentations (progress report/review, milestone, final presentations)

Prof. Paul Lin

7

Course Outcomes (cont.)

1. Use of knowledge and skills
2. Conduct unit and system testing, collect testing data and interpret results
3. Write progress and final project report
4. Make oral presentations
5. Demonstrate project performance

Prof. Paul Lin

8

Course Outcomes (cont.)

5. Demonstrate project performance

1. Experimental circuits setup, testing, and data analysis
2. Creativity in design
3. Teamwork – stakeholders: project sponsor, faculty advisor, project team, etc
4. Project related research work
5. Application of ethics – health, safety, wellbeing, etc
6. Diversity in knowledge & solution
7. Knowledge of societal issues – economic, productive, growths, etc
8. Knowledge of global issues – environment, cultural needs, etc

Prof. Paul Lin

9

Course Outcomes (cont.)

5. Demonstrate project performance

9. A commitment to project quality
10. A commitment to project timeliness – progress report, completion times, etc
11. Project is operational and meet or exceed specifications requirements
12. Familiarity with the project (including ability to answer questions)

Prof. Paul Lin

10

Tools for Design, Simulation, Development, and Prototyping

- Microsoft Software and Tools
 - Microsoft office: Words, Excel, PowerPoint, Access
- Microsoft Visio
 - System architecture
 - Software design, block diagrams, flow charts,
 - Business process, data flow diagrams, database model diagrams, Web site and systems, enterprise applications
 - UML (Unified modeling language)
 - Activity diagram, Collaboration diagrams, Component

Prof. Paul Lin

11

Tools for Design, Simulation, Development, and Prototyping (cont.)

- Microsoft Visio
 - UML (Unified modeling language)
 - Use Case
 - Static Structure (data type, class, object, interface, package, etc)
 - Activity diagram
 - Collaboration diagrams
 - Component diagram
 - Deployment diagram
 - Statechart (state transition) diagram
 - Sequence diagram

Prof. Paul Lin

12

Tools for Design, Simulation, Development, and Prototyping (cont.)

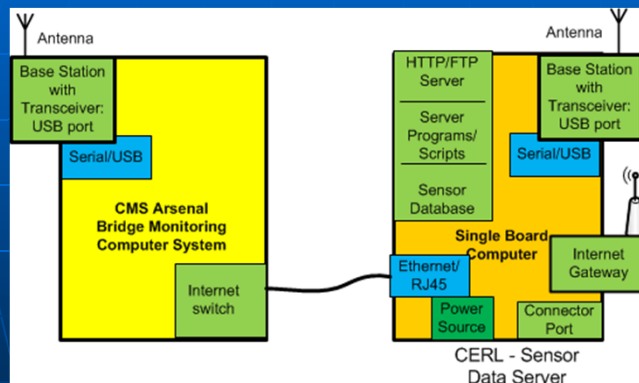

- MATLAB
 - Math and calculations modeling, analog and digital control system design and modeling, communication system, etc
- Multisim/Ultiboard
 - Electrical, Electronics, Digital Circuit design and simulation
- Other Software IDEs
 - Microsoft Visual Studio.NET 2012
 - Eclipse IDE, Android, Java
 - etc

Prof. Paul Lin

13

System Design Example 1

- Sensor System Architecture

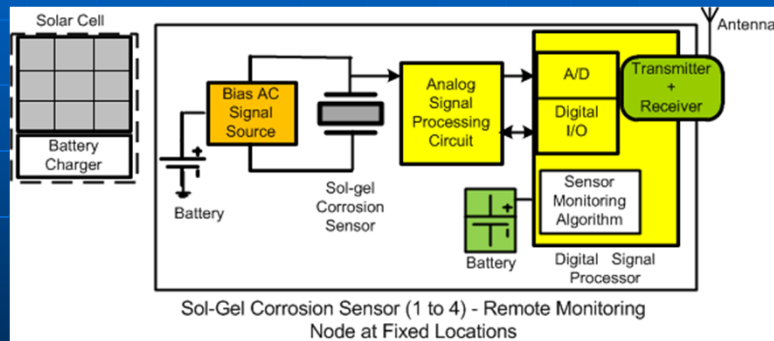

Prof. Paul Lin

14

System Design Example 1 (cont.)

- Sensor Data Acquisition and Communication System Design, Simulation, and Prototyping

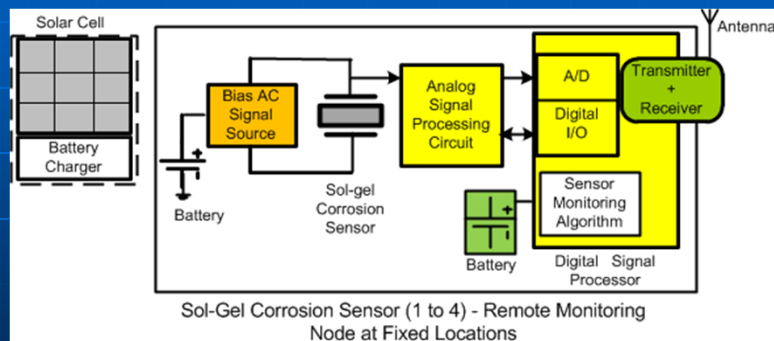

Prof. Paul Lin

15

System Design Example 1 (cont.)

- Sensor Node for Data Acquisition and Communication

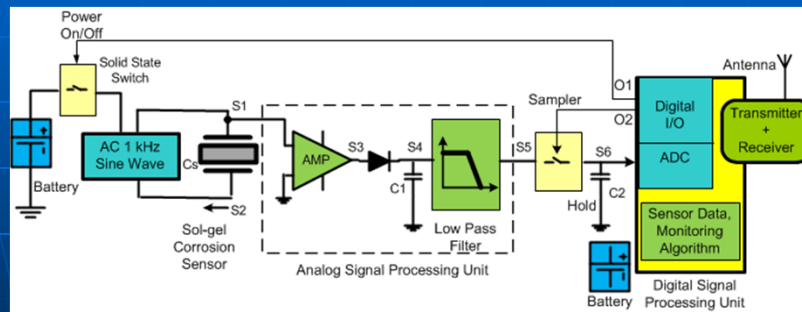

Prof. Paul Lin

16

System Design Example 1 (cont.)

- Detailed Sensor Data Acquisition Diagram - 1

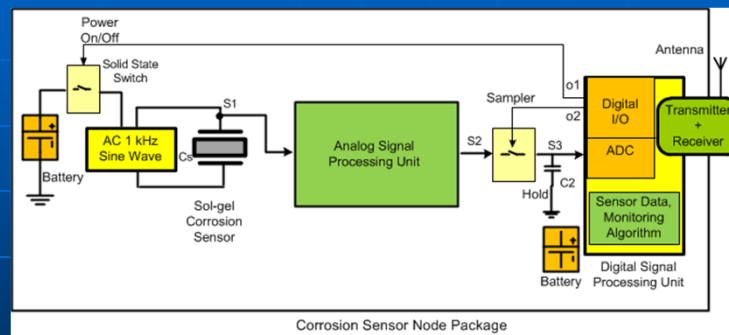

Prof. Paul Lin

17

System Design Example 1 (cont.)

- Detailed Sensor Data Acquisition Diagram - 2

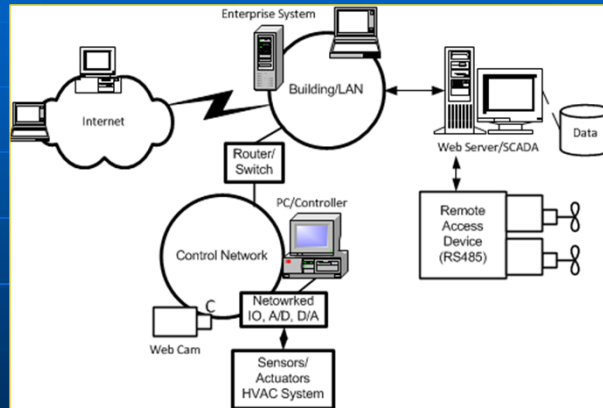

Corrosion Sensor Node Package

Prof. Paul Lin

18

Web-Based HVAC Monitoring & Control System Example 2

■ System Architecture

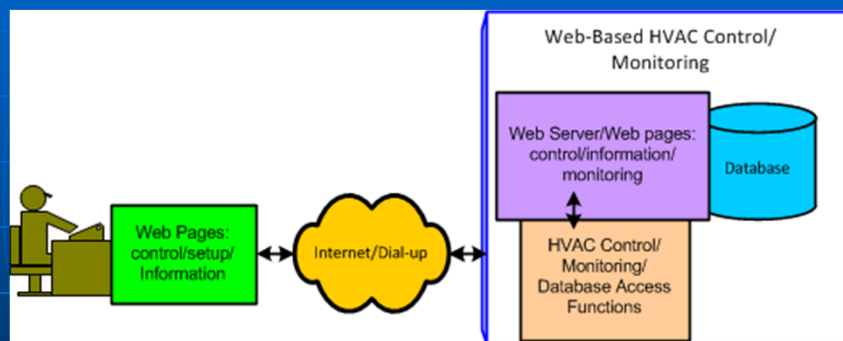

Prof. Paul Lin

19

Web-Based HVAC Monitoring & Control System Example 2

■ HMI & System Interaction Diagram

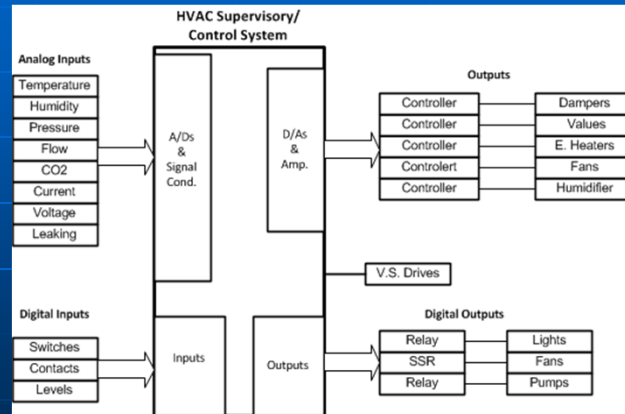

Prof. Paul Lin

20

Web-Based HVAC Monitoring & Control System Example 2

- I/O Interface Diagram

Prof. Paul Lin

21

Web-Based HVAC Monitoring & Control System Example 2

- A Flow Chart for Accessing Web-based HVAC Sensor Database

22
